

Turntable for BAS 60

HDP 600

20410029

Features

- Turntable for automatic alignment of the BAS 60 planar antenna to the desired satellite
 - To control the turntable, the DVB-S receiver UFS 740sw is required
 - User friendly due to UFS 740sw on-screen display (OSD)
 - The entire turntable can be controlled via the receiver remote control
 - Automatic alignment onto other satellites on changing to a programme on another satellite
 - Easy to install as few cables are required (one coaxial and one power cable)
 - Automatically lowers when the engine is started
 - Emergency stop in case of overload
 - Turntable software is updated via the receiver
 - Little space is required for antenna alignment
- Vehicle Vmax: 130 km/h
 - Aerodynamic construction with only 21 cm in height (when lowered)
- Delivery scope:
Turntable complete with electronic controller, mounting plate, fixings with roof duct, complete set of cables with 8 m coax and 10 m power cable, mounting instructions and user guide
