

SW Update Guide for UFS 301

Connect PC and receiver with a suitable data cable (see below for details)

Start the loading programme „dvbeditor V1.2.3 (for CA).exe“

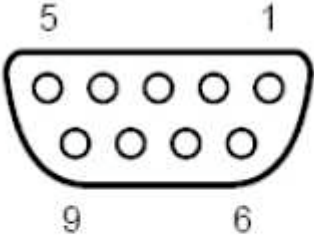

Choose the requisite software using the key HEX and switch on the receiver keeping the stand-by button pressed down until „Load“ is shown in the display. Then press down on „P→“ and wait until „-OF-“ is shown in the display. After the software has been loaded, the programme list is not active. To activate the programme list which is saved in the updated software, please work through the following points:

- Switch the receiver off and then on again using the mains switch
- In the menu „Installation – System set up“ carry out a factory reset.
-

The programme list will then be activated:

Update cable UFS 301 :

Pin allocation on update cable, which should be approx. 1,5 metres long

RJ-11
